EXECUTIVE SUMMARY

Let me introduce myself, I am a graduate of informatics engineering from the University of Lampung. I am interested in learning something new, especially in project team, I have experience working as a system implementor in Dr. H. Abdul Moeloek Hospital, also I ever experience with android development in team and I have experience in team project as project leader in my team.

EDUCATION

SMA Negeri 1 Kota Metro – Lampung, Indonesia 2018 - 2021
Natural Science: 88,13/100

Android Development at Bangkit Academy August 2023 – January 2024
In this education, I learned about Android application development from the beginning to the end, as well as learning about project management, time management, leadership and project development.

University of Lampung – Bandar Lampung, Indonesia 2021 - 2025
Graduate in Informatics Engineering
Cumulative GPA: 3.83/4.00

PT Gawai Mutu Digital – Bandar Lampung, Indonesia December 2025 – May 2026
I act as a system implementer for the Abdul Moeloek Bandar Lampung Hospital ERP system, my main task is to understand the overall hospital workflow both in terms of the system and real-world work. Provide training and direction to hospital staff regarding how the ERP system works. Furthermore, understand and record all feedback from users to be used as data for future system development.

EXPERIENCE

2022 - 2023 | Pengembangan Keteknikan - Pengembangan Masyarakat | Himpunan Mahasiswa Teknik Elektro
Responsible for being a member of the student association and participating in community empowerment activities around Lampung

2023 | Project leader | Crop Optima
Responsible as project leader for the development of the Crop Optima application, my task as project leader was to organize and supervise application work using the Kanban method, at the end of the project the project developed was included in the top 50 best projects

2023 | Android Developer | Crop Optima
Responsible as an Android developer, apart from being a project leader in the development of the Crop Optima application, I also act as an Android developer whose role is to build applications through the programming side of Android-based applications using MVVM architecture and Firebase.

2024 | Android Developer | Sistem Cerdas Rekomendasi Tanaman Perkebunan Berbasis Machine Learning Sebagai Adaptasi Perubahan Iklim
Responsible as an android developer, this project is a project that collaborates with lecturers as his research fellow with the aim of being able to recognize a plant using image processing, in android development using Machine learning with Model H5 and MVVM architecture

2025 | Android Developer | Teman Jalan

Responsible for developing the Android application for the "Teman Jalan" application, this application was built using Jetpack Compose with the aim of monitoring internet of things based sticks with communication using API.

December 2025 – April 2026 | System Implementor | Siger Medik 2

Responsible for Provide training and direction to users in operating the Siger Medik 2 system (Hospital ERP System) in Dr. H. Abdul Moeloek Hospital. Accepting feedback provided for future system development, As a communication bridge between users and the technical team in using the system.

May 2026 | System Implementor | Siger Medik 2.1

Providing training and direction to users in operating the Siger Medik 2.1 system (Hospital ERP System), which is a transition from the Siger Medik 2 Hospital ERP System in Dr. H. Abdul Moeloek Hospital. As a communication bridge between users and the technical team in using the system.

TRAINING & CERTIFICATION

- [Bangkit Academy led by Google, Tokopedia, Gojek, & Traveloka](#) January 2024
about Android application development from the beginning to the end, as well as learning about project management, time management, leadership and project development.
- [Memulai Dasar Pemrograman untuk Menjadi Pengembang Software](#) August 2023
about managing application development, time management during application development and how to manage a team when working on a project so that it is on time
- [Belajar Membuat Aplikasi Android dengan Jetpack Compose](#) September 2023
android application development uses a modern system, namely using Jetpack Compose, namely Android development which is declarative in nature, different from traditional development which is imperative in nature.
- [Belajar Pengembangan Aplikasi Android Intermediate](#) October 2023
learn about further Android development such as the use of geo-location on Android devices and sustainable Android development
- [Belajar Fundamental Aplikasi Android](#) August 2023
learn about the fundamentals of Android development itself, such as connecting to the internet, databases, retrieving data from API, MVVM architecture in native Android application development
- [Belajar Membuat Aplikasi Android untuk Pemula](#) August 2023
learn the basics of Android development itself, such as creating basic layouts, simple logic in applications, implementing standard features that will often be used in applications and understanding Android in basic terms
- [Memulai Pemrograman Dengan Kotlin](#) August 2023
learn about the basic and comprehensive use of the Kotlin programming language
- [Memulai Pemrograman dengan Dart](#) March 2023
learn about basic and comprehensive use of the dart programming language to use the flutter framework

PROJECTS

[Crop Optima](#)

using a traditional imperative Android application development system using MVVM architecture, retrofit, and firebase , with the addition of using a machine learning system for plant data management

[Rick And Morty Friend](#)

This application is an Android application developed using the Android Jetpack Compose development concept, namely a modern native Android development system using a declarative programming system.

[Story App](#)

Android-based application that functions to upload stories and has login and registration features that use API, this application was built using DI (Dependency Injection), MVVM, LiveData, Paging 3, Local Data (ROOM) and Retrofit.

[Github User App](#)

Android-based application that functions to search and display users on GitHub, this application was built using MVVM architecture and libraries including ROOM, Coroutine, Retrofit, Viewmodel and Livedata

PROJECTS

[Plant Scan](#)

Android-based application that functions to search and display users on GitHub, this application was built using MVVM architecture and libraries including ROOM, Coroutine, Retrofit, Viewmodel and Livedata

[Teman Jalan](#)

An Android-based application developed using the Android Jetpack Compose development concept, that functions to monitor adaptive blind canes based on the internet of things. The features offered are monitoring the location of the cane, the status of the cane, and emergency notifications from the cane.

SKILLS

Language: English & Indonesian (Native)

Programming : Java,Jetpack Compose,Flutter,Express JS

Others: team management, time management, user training, logical thinking, troubleshooting and operating generative AI (ChatGPT, Gemini, Claude).
